LIFE mBiG. KEY ELEMENTS.

- **The challenge:** Improving climate resilience and well-being of schools and social centers in Spain and Portugal
- **The approach:** Design prototypes of NBS as climate adaptation tools to be implemented in 3 education and social services buildings
- **Governance and collaboration:** development of regulations and good practices around NBS in education and social services buildings, which allows their replication in other buildings in Spain and Portugal
- **Results:** Improving well-being and climate resilience in 3 pilot buildings
- **Long-term:** Inclusion of NBS in local climate adaptation policies

#NewEuropeanBauhaus

KEY ELEMENTS

- **The challenge:** green for grey in peri-urban Flanders
- **The approach:** together for a multi-functional green-blue in 6 project areas of Flanders' metropolitan areas
- **Governance and collaboration:** co-creation with citizens, vision by policy makers and experts, creative experiments with students and experts, developing biodiversity with businesses and design by children
- **Results:** green-blue in the field
- **Long-term:** green-blue on the (inter)national en regional agenda

NATURAL CLIMATE BUFFERS

SUBPROJECT LIFE IP DELTA NATURE

Objective: from pilots to mainstream!

Strategy:

1. Influencing policy
2. Best practices: Showing what works!
3. Gathering knowledge
4. Communication

SUSTAINABLE: LEARNING BY DOING

Types of climate buffers

Ecosystem engineers

Use of organisms to establish sediment and/or slow down waves

Carbon sinks

Carbon sequestration in organic material, formation of marshes and salt marshes

Green air conditioning

Temperature reduction from wetlands in and around the city

Natural sponge

Water retention in natural areas on higher ground

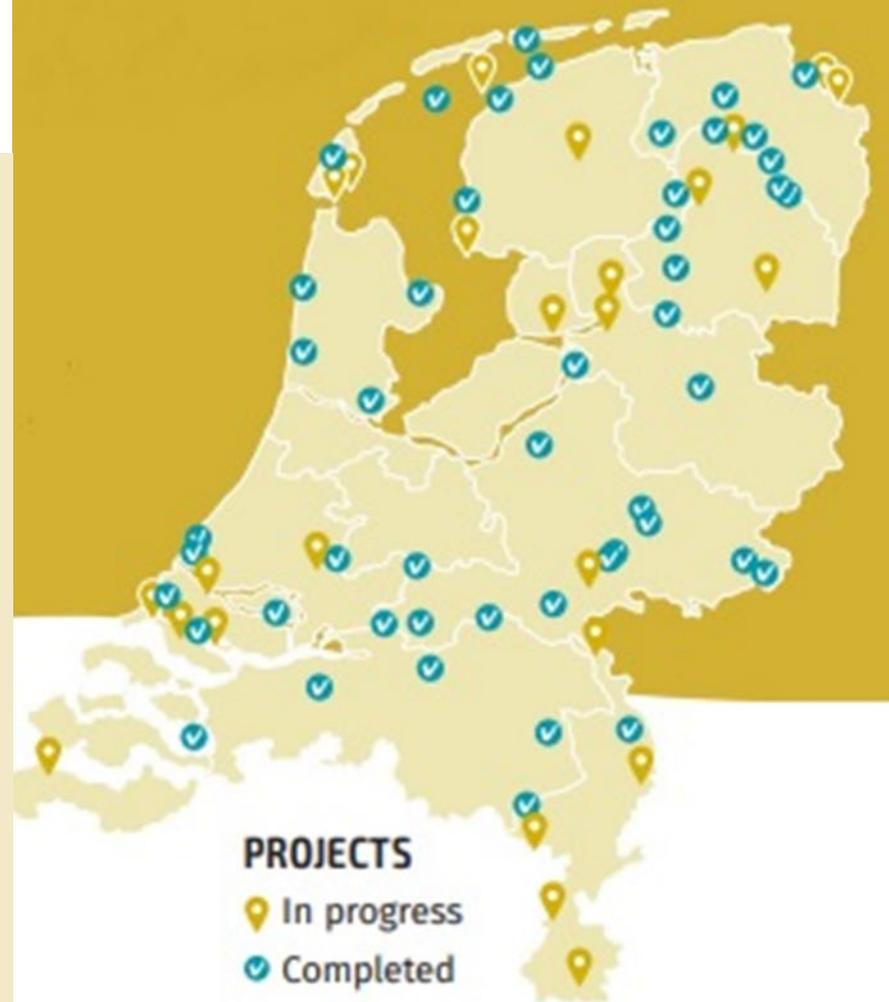

Living coast

Natural dunes with shifting sand, sandbanks and expanding salt marshes as coastal protection

Room for nature and water management

Natural inundation areas store the water when there is heavy precipitation and peak discharge

For a current overview of projects, please click on klimaatbuffers.nl

SUSTAINABILITY

Kompositio | Ein am weitesten Auftrieb der Nutzflächen auf der Fläche zu ermöglichen sind die Aufteilung mindestens eines Kompositus anzuhalten. So kann auch einer möglichen Veränderung des NBT durch Parkbeschränken vorgebaut werden. Der gesamte Standort sollte nach einer ersten Berücksichtigung, gegebenenfalls gemeinsam mit den Nutzern geteilt werden. Somit wird sich eine Platzierung im südlichen Bereich der Fläche, nahe des Stadtparks.

Schneidern für eine gute Regenwasser. Die Fläche im Norden kann mit einem kleinen Teich und einem kleinen Wasserlauf versehen werden.

Beobachtungsturm | Eine gute Möglichkeit, die Fläche zu nutzen und gleichzeitig die Fläche zu beobachten. Die Fläche kann mit einem kleinen Teich und einem kleinen Wasserlauf versehen werden.

Häufigkeit | Die Fläche kann mit einem kleinen Teich und einem kleinen Wasserlauf versehen werden. Die Fläche kann mit einem kleinen Teich und einem kleinen Wasserlauf versehen werden.

LIFE mBiG - INCLUSION

- NBS inclusive, egalitarian and adapted to the challenges of climate change
- Participatory design of NBS by students in pilot buildings
- Selection of pilot buildings in impoverished neighborhoods, with different cultures and high unemployment rate
- We use the educational potential of NBS in schools
